Creative Performance, workshop architecture, 2014

The project tried to integrate art into the mandatory teaching program of a university by an obligatory teaching module called "Creative Performance". This module targeted to integrate artistic practices from the fields of design, architecture, performance, music, film, concept-art, and literature into the curricula of study programs in the field of politics, social science, economics, culture and communication. They were taught as workshops by internationally renowned artists. Day-long planning and resume-meetings brought scientists and artists together to develop aims and methods.
